### 10-part set stainless steel care cloths with anti-fingerprint effect

The stainless steel care cloth with anti fingerprint effect cleans and cares stainless steel and other metallic surfaces and protects them with a natural, environmentally friendly protective film. The cloth is therefore ideal for outer lights and mailboxes.

- ingredients: 5 to 15% non-ionic surfactants.
- Other ingredients: isopropyl mystate, fty acid, ethoxyethanol, Castor Oil, ethoxylated.
- without color, fragrance and preservatives.

#### application tips

Clean old metallic surfaces with the cloth in a circular movements. In addition to cleaning, an anti-fingerprint layer is set up, which protects against new spots. The cleaning area is slightly darkened by the protective film. So clean the entire object. Protection works for weeks, but is also easy to solve with conventional cleaning agents. Apply again with a new cloth if necessary.

After installing the mailbox, a clearing should be carried out so that any dirt is removed by storage, transport or construction or assembly residues. Protective layers made of paper, foils or residues of adhesive adhesive must be completely removed after assembling the assembly, as they can lead to corrosion. Then the mailbox should be subjected to care every 3- 4 weeks.

**Please note :** Under no circumstances may steel wool, steel brushes or similar be used for stainless steel cleaning, since such aids violate the protective surface and enable the formation of foreign rust by abrasion. Corrosion symptoms caused by flugrost are excluded from the warranty.
