## DoorBird IP Door Chime A1061W white

The DoorBird IP door chime can be mounted flexibly in the house on a wall or mounted on a wall or ceiling. The connection of the door chime to the network can be done via WLAN or via network cable. If the door chime is connected via Network cable, it can also be conveniently supplied with power via Power-over-Ethernet (PoE) with power supply. The network-based door chime is configured via the DoorBird App. In addition to the volume, a Variety of ring tones can be set. One DoorBird door station can be coupled with any number of Door chime can be coupled with any number of door chimes supports any number of door stations. For each door station an own ring profile can be created in the door chime Doorbell profile can be created. The door chime can also be work exclusively via the local network (LAN), if, for example, the Internet is down for a short time. In addition, a floor call button can be connected to the door chime via a two-core two-wire line and an individual ringing profile can also be individual bell profile can be stored. Thus the Resident always knows immediately whether the front door or his or her Doorbell has been rung.
