COMELIT IP home station video 6742W with mobile function

Color monitor with 4.3" screen 16/9, hands-free full-duplex and touch-sensitive buttons. Regulation of brightness, color and volume of the ringing tone, which can be selected individually among different melodies. Equipped as standard with buttons for door opener, with corresponding LED indicator, as well as with 7 additional soft-touch buttons for call answering, self-activation, call to gatekeeper control panel, ringing tone deactivation, menu call as well as menu control. Manages the storey call as standard. The equipment includes the base plate for wall mounting or for mounting on housings for residential use. Power supply via PoE and connection via RJ45 plug to the ViP system. Dimensions: 160x115x22mm.

This version of the is equipped with an integrated Wifi system. After installing the system and the free available app for your smartphone (Apple iOS or Android), you can connect both in a few and very simple steps. This also requires a one-time registration with the Comelit Cloud. After that, you can access your indoor station from anywhere in the world. Image and sound are transmitted smoothly and in a high quality. Both communication and opening the front door or gateway is possible via the app. The app enables the management of the video intercom and other advanced functions also via the 3G network or higher networks.

With the 6742W door station and the Comelit app, you simulate domestic presence no matter where you are. When a neighbor, a letter carrier or a stranger rings the doorbell, you answer the door call with your smartphone or tablet and give the visitor in front of the door the feeling that you are at home, even if you convince him with an excuse that you can't come to the door right now (we are bathing the children; I am expecting visitors and am changing; I just got out of the shower...). When a door call is received, it is sent from the Mini WiFi indoor intercom to the Comelit Cloud via the WiFi router and forwarded to the smartphone or tablet (requires 3G / LTE data connection). Due to the unique technology of IP technology in combination with a WiFi monitor, the time delay for the reception in the 3G network to the mobile device is only about 5 seconds. The mobile device opens the app even if it is closed: the push function makes this possible.

The ViP system is the evolution of video intercoms and related services related services. The services meet all modern requirements of buildings used for residential, commercial, industrial and industry-related services buildings: from single-family houses to building complexes, both new buildings and reconstructions or renovations of old buildings. It is designed for the Unlimited number of subscribers and allows simultaneous allows simultaneous calls without distance limitations. The devices are connected to a single, dedicated or existing network via RJ45 Devices are connected via RJ45. In the ViP system, all devices are connected to the (dedicated or shared) LAN network, from the remote site to the most distant indoor station Indoor station. Compared to the traditional analog video intercom systems, the digital network protocol enables easy Configuration of the system without costly or complex measures. Even system upgrades are extremely versatile and practical executable. Installation, commissioning and reconfiguration can be carried out in the And reconfigurations can be carried out easily and completely securely on the network.
