COMELIT IP home station Video Maxi with 7 inch screen white with mobile function

IP indoor station Video Maxi in white for surface or flush mounting, 7" touch screen 16/9 and handsfree fullduplex. Allows adjustment of backlighting, contrast control and setting the volume of the voice connection and ringing tone. Standard features include sensitive touch buttons for door opening, intercom, self-activation, ringer silencing and 2 additional programmable function buttons, LED indicators for open door and new messages. Manages storey call and call repeat as standard, has panic and alarm input and a slot for a micro SD card. Ringtone and function video memory with message in case of absence can be personalized. In addition, the Maxi WiFi is equipped with a WiFi module that allows the monitor to connect to its own WiFi home network. The Comelit app must be downloaded from Google PlayStore or Apple AppStore and the smartphone must be connected to the monitor via smart registration. Thus, the video door call including audio communication is accessible in WiFi and 3G network. Power supply via PoE and connection via RJ45 connector to the VIP system. Dimensions: 223x124x25mm.

This version of the is equipped with an integrated Wifi system. After installing the system and the free available app for your smartphone (Apple iOS or Android), you can connect both in a few and very simple steps. This also requires a one-time registration with the Comelit Cloud. After that, you can access your indoor station from anywhere in the world. Image and sound are transmitted smoothly and in a high quality. Both the communication and the opening of the front door or gateway is possible via the app.

With the 6742W door station and the Comelit app, you simulate domestic presence, no matter where you are. If a neighbor, the mailman or a stranger rings the doorbell, you answer the door call with your smartphone or tablet and give the visitor in front of the door the feeling as if you were at home, even if you convince them with an excuse that you can't come to the door right now (we are bathing the children; I am expecting visitors and am just changing; I just got out of the shower...). When a door call is received, it is sent from the Mini WiFi indoor intercom to the Comelit Cloud via the WiFi router and forwarded to the smartphone or tablet (requires 3G / LTE data connection). Due to the unique technology of IP technology in combination with a WiFi monitor, the time delay for the reception in the 3G network to the mobile device is only about 5 seconds. The mobile device opens the app even if it is closed: the push function makes it possible.

The VIP system is the evolution of video intercoms and related services related services. The services meet all modern requirements of buildings used for residential, commercial, industrial and industry-related services buildings: from single-family houses to building complexes, both new buildings and reconstructions or renovations of old buildings. It is designed for the Unlimited number of subscribers and allows simultaneous allows simultaneous calls without distance limitations. The devices are connected to a single, dedicated or existing network via RJ45 Devices are connected via RJ45. In the ViP system, all devices are connected to the (dedicated or shared) LAN network, from the remote site to the most distant indoor station Indoor station. Compared to the traditional analog video intercom systems, the digital network protocol allows easy Configuration of the system without costly or complex measures. Even system upgrades are extremely versatile and practical executable. Installation, commissioning and reconfiguration can be carried out in the And reconfigurations can be carried out easily and completely securely on the network.
