Stainless steel mailbox Division Big - RAL Color - bell-speaking system - house number

The mailbox division with its massive 10mm design panel is an upper class model among the mailboxes. The 2mm front panels made of stainless steel V2A 1.4301 in your desired color are placed on a 5mm stainless steel frame and can easily stand out from the house wall. Characterized by the sustainability idea, this mailbox was developed with interchangeable panels based on the designer collection. All aperture can be exchanged at any time, whether a new video fore system system, a new house number or a change of lettering, all the panels can be replaced in very light. The Division BIG model has a newspaper flap for newspapers, magazines and books.

The Design Postal Division is optionally equipped with a bell and preparation for a intercom. We offer a flexible selection of installation speakers preparations for all speech analog manufacturers. Furthermore, more possible on request.

A real eye-catcher among the mailboxes. Clear lines and straightforward design are characterized by the mailbox division. Our products have a high value, reliable functionality and their own identity. Made by mailbox manufactory.

- Mailbox made of stainless steel V2A 1.4301, 2mm front panels + 5mm frame powder-coated in RAL of your choice. Optionally also as a wall-mounted variant with wall-mounted box in stainless steel, 240-part grain.

- Steel cleaning box, galvanized. wall-mounted box made of stainless steel V2A, all sides grinding without visible screw connection.
- Plastering box with pretzled cable inlets on all sides.

Important information

Speaking point preparation

We always recommend the electrical installation to be carried out by an electrical installer.

We offer the preparation of installation speakers from various manufacturers for our mailboxes. The preparation does not contain any end devices, which are the provision of the screw recordings, bores and perforations. So that you can easily install your device.

Water protection

In order to achieve optimal water protection of your post, the mailbox or the mailbox system should be under a canopy if possible. The post office is only protected from water if it is completely stored in the box and the throw-in flap is closed. Unskinned mail enables the penetration of moisture and dirt into the mailbox. It is therefore necessary to plan sufficiently dimensioned mailboxes for the upcoming need. This system is protected against the penetration of water according to DIN EN 13724. Water entry is not a reason for complaint.
