DoorBird keypad module with 12 stainless-steel buttons – brushed V4A stainless steel

Product number 1298-DBKPK

Product description

DoorBird Keypad Module with 12 Buttons – Brushed Stainless Steel V4A

The DoorBird keypad module with 12 buttons expands compatible DoorBird IP video door stations with convenient access control via PIN code. It is suitable for entrance areas where doors, gates or other functions should be controlled using individually configurable keypad codes.

The brushed stainless steel V4A finish is resistant to saltwater and flash rust and visually complements high-quality DoorBird door stations. The keypad module is intended for selected models of the D11x, D18x and D21x series and, depending on the door station and configuration, can be used for access control, relay switching or event-based actions.

PIN code access for DoorBird IP video door stations

The DoorBird keypad module can be configured via the DoorBird App. It allows individual PIN codes, schedules and actions, for example switching a relay, activating a door opener or calling an HTTP(s)-URL. This makes access flexible to suit users, times and property requirements.
