Module with lighting - flush-mounted 12 V LED panel | RAL 9007 grey aluminium, fine-structure matt

Product number BML-9860-STKD-376-LED-12V-FB-9007

Product description

LED panel with energy-efficient LED lighting – 12 V DC, warm white

The LED panel is the ideal addition to modular column solutions and provides subtle, indirect lighting for entrance or outdoor areas. The warm white LED lighting aids orientation in darkness and visually enhances the installation with a high-quality appearance.

The luminaire is deliberately designed as a restrained accent and orientation light. It produces a pleasant, indirect illumination that subtly lights the column or the immediate area. The LED panel is not intended to fully illuminate a pathway, driveway or larger outdoor areas.

The module is designed for clean and service-friendly integration. It is inserted into the designated module slot and blends harmoniously with the overall appearance of the column. The modular design allows the LED panel to be easily replaced or retrofitted if required.

The LED lighting operates at 12 V DC and impresses with very low power consumption. With a power consumption of approx. 1 W, the LED panel is particularly suitable for applications where a permanently usable, energy-efficient orientation light is required.

The warm white light colour of approx. 3,500 K is pleasant and modern without appearing obtrusive. This makes the LED panel ideal for high-quality mailbox systems, power outlet columns and reception solutions where design, function and subtle lighting are to be combined.

A suitable LED power supply for operation at 12 V DC is included.
Module colour: RAL 9007 grey aluminium, fine-textured matt
