Set of 10 stainless steel cleaning cloths with anti-fingerprint effect

Product number 686-PT

Product description

Set of 10 stainless steel care cloths with anti-fingerprint effect

The stainless steel care cloth with anti-fingerprint effect cleans and cares for stainless steel and other metallic surfaces and protects them with a natural, environmentally friendly protective film. The cloth is therefore ideal for outdoor lights and letterboxes.

- Ingredients: 5 to 15% non-ionic surfactants.
- Other ingredients: Isopropyl Myristate, Fatty Acid, Ethoxyethanot, Castor Oil, ethoxylated.
- Without colourants, fragrances and preservatives.

Application tips

Clean old metallic surfaces with the cloth in circular movements. In addition to cleaning, an anti-fingerprint layer is built up which protects against new stains. The cleaning surface is slightly darkened by the protective film. Therefore, clean the entire object. The protection is effective for weeks, but can also be easily removed with conventional cleaning agents. If necessary, reapply with a new cloth.

After installing the letterbox, an initial cleaning should be carried out to remove any soiling caused by storage, transport or construction or installation residues. Protective layers of paper, film or adhesive residue must be completely removed after assembly, as they can lead to corrosion. The letterbox should then be maintained approx. every 3 - 4 weeks.

Please note: Under no circumstances should steel wool, steel brushes or similar be used when cleaning stainless steel, as such tools damage the protective surface and allow the formation of extraneous rust through abrasion. Corrosion caused by flash rust is excluded from the warranty.
