DoorBird Multi-tenant Module MTM18A for DoorBird Call Buttons

Product number 1298-DBMTM18A

Product description

DoorBird MTM18A multi-tenant module for up to 18 call buttons

The DoorBird MTM18A multi-tenant module enables the connection of up to 18 call buttons to compatible DoorBird IP video door stations. It is suitable for multi-tenant systems where several residential units, office units or users are to be called directly via individual call buttons.

The module is intended for DoorBird D2100E and D2100EA IP video door stations and is connected to the call buttons inside the door station. The assignment of the individual call buttons is made via the corresponding connections on the multi-tenant module, allowing a structured expansion of DoorBird door communication for apartment buildings or commercial properties.

Expansion for DoorBird multi-tenant systems

With the MTM18A, DoorBird IP video door stations can be configured for systems with multiple subscribers. The module is connected directly to the door station; the call buttons are connected according to their position on the multi-tenant module. This makes the module particularly suitable for customised letterbox systems, bell panels and entrance areas with multiple parties.
